

IAEG Sustainability Assessments Engagement Kit - IAEG & EcoVadis

An Overview for Prospective Members

Assessments made...

- Reusable
- Responsible
- Sustainable

Industry Voluntary Supplier ESG Assessment Initiative Powered by **ecovadis**

Executive Summary

International Aerospace Environmental Group (IAEG) has been the leading environmental global aerospace and defense (A&D) forum for sharing good practices concerning key issues and developing consensus standards. Created to collaborate on and share innovative environmental solutions for the industry, IAEG and the industry members are expanding the organization's scope to drive a harmonized voluntary A&D industry supplier sustainability assessment, sector level sustainability performance data, and supply base sustainability stewardship engagement cadence with a recognized industry leader.

In 2020, IAEG evaluated over 100 solution providers via desktop review, which led to sending a Request for Information (RFI) to a subset in March 2021. In April 2022, a Request for Proposal (RFP) was issued by IAEG that included technical assessment, offering demonstration, Q&A sessions, reference calls and pricing analysis. In October 2022, the RFP effort resulted in EcoVadis being selected as the industry leading solution provider to enable a sectoral approach while also meeting the needs of individual IAEG member companies.

The remainder of this document provides an overview of the EcoVadis core offering for IAEG and its members that choose to engage in this voluntary sectoral approach to supplier sustainability assessments and supply base sustainability performance analysis. IAEG member participation in this sector initiative is voluntary and governed by IAEG's compliance policies. Each participating company needs to independently assess the value with respect to efficiencies gained via a sectoral approach and contribution toward their respective compliance obligations (e.g., supply chain duty of care laws), corporate sustainability reporting objectives and fit within their responsible sourcing practices.

For more information and contacts please see the last slide.

Aerospace & Defense Sector Initiative

Solid Governance, Strategic Guidance, Voluntary Standard

- IAEG Legal counsel led **antitrust compliance guidance** and initiative review
- **Secure technology platform** with appropriate data privacy controls
- **Supplier sharing pool** with sources anonymized to avoid antitrust concerns
- **Onboarding for new aerospace and defense companies** joining the sector initiative
- **Industry group program management** and governance jointly conducted by a dedicated EcoVadis Initiative Program Manager and IAEG Working Group 11 governance workstream leader
- **Quarterly initiative program reviews** and execution of resulting actions
- **IAEG to ensure proper governance** and regular representation of members in key meetings

Solid governance
Strategic guidance
Voluntary standard

Reusable, Responsible, Sustainable

- Initiative **data mining and dashboard** for supply base sustainability performance analysis, longitudinal trends, cross industries benchmarking, and identification of sustainability topics to focus supply base engagement
- **Analysis** of relevant **sustainability topics** in the procurement categories
- Summaries of global supply chain **duty of care compliance obligations and awareness** on how the sector initiative may support member company compliance approaches
- **Supply base sustainability engagement** via white paper (1 per year), impact workstreams (up to 3 in parallel) and capability building webinars (up to 4 per year)

IAEG Sustainability Assessments

Powered by EcoVadis

1. Reusable

Participating IAEG Members recognize the voluntary standard

"Wasted effort eliminated"

2. Responsible

Sector Initiative benchmarking
Due Diligence building block

3. Sustainable

"Sector Materiality Assessment"
Data driven Sector Improvement initiatives
