

IAEG's Recently Expanded Charter

August 12, 2021

Since its inception, in 2011, the International Aerospace Environmental Group (IAEG) focus has been on addressing human health and environmental issues of particular importance to the aerospace industry. To that end, over the past 10 years, IAEG has made significant progress on key topics for the sector. Industry resources and tools have been developed for members to leverage on a voluntary basis, such as:

Hazardous Substances Tracking (IPC1754, AD-DSL, etc.)

Chemical Substance Replacement Technologies

Industry Guidelines for Greenhouse Gas (GHG) accounting and ISO 14001 and EMS implementation

Impact Analysis of Global Environmental & Chemical regulatory activity

While IAEG has accomplished so much already, it remains committed to keeping pace with emerging developments that impact the aerospace industry. As part of that ongoing commitment, IAEG's membership voted overwhelmingly in favor of expanding the scope of its activities to address not only Environment but also Social and Governance (ESG) issues of significance to the aerospace industry.

"While corporate ESG reporting obligations to demonstrate company commitments to sustainability become more stringent and demanding worldwide, this expansion of the scope became obvious to develop industry resources, while minimizing the administrative burden and associated costs for its entire supply chain" expressed Bruno Costes, IAEG chair.

Congratulations to IAEG, its membership and the aerospace sector on this giant step forward and the contribution IAEG will provide towards sustainable aerospace!
